

EDUC 641 Lab: Applied Statistics in Education and Human Services I

Meeting: Wednesdays, 4:00p - 4:50p, Lokey 115; Thursdays, 5:30p - 6:20p, Lokey 176

Graduate Employees: Brittany Spinner; bspinner@uoregon.edu

Office Hour: TBD—I like to confirm when students are most available to set a day and time. We can either do Zoom or in-person. If you ever need help outside of class, you can always reach me.

Overview:

The labs for EDUC 641 (and the sequence) are designed to provide hands-on coding support in the R programming language using the RStudio interface, so that students can follow the material covered in lectures, textbooks, and assignments. The labs are ungraded and do not count toward student evaluation. Since students in the class come from diverse coding backgrounds, we assume no prior coding experience. However, the lab sessions are not designed to make students proficient coders. Rather, we hope that students become comfortable coding in R to carry out the statistical analyses covered in class in their own context.

Structure and Expectations:

Lab sessions will be used to review key coding concepts covered in class or to assist students with the coding aspects of assignments. For labs focused on content review, students will receive a worksheet to complete during lab time. For labs that provide support with assignments, students are expected to have reviewed and attempted the assignment and to bring their specific questions to the lab. They will also have time to work on their own and ask for help as needed. Students will need a working device with an internet connection during the sessions (reach out to the instructor or the GEs if you do not have a device and need support accessing one).

Students are encouraged to -

- a. Work in groups and co-learn with their peers as they navigate through statistical coding
- b. Review course material prior to the lab and identify points of doubts/confusion
- c. Seek GE support during the session, via email, office hours, etc.
- d. Attend lab meetings on the days they have signed up for; ok to switch now and then, but I can only provide so much support to an entire class, versus it being split up.

Schedule (tentative):

Week 1: Setting up R/RStudio and using R script

Week 2: Importing data and saving results + Assignment 1 work session

Week 3: tidyverse() and graphing

Week 4: Assignment 2 work session

Week 5: tidyverse() and graphing

Week 6: datasummary()

Week 7: Assignment 3 work session

Week 8: exporting and interpreting `lm()` output

Week 9: Assignment 4 work session

Week 10: Final Project work session

Course Material Acknowledgment: David Leibowitz, Congli (Claire) Zhang, Cengiz Zopluoglu, Daniel Anderson, Joseph Nese
